

SUBMERSIBLE

The **DIG11** is a light and compact contractor pump, capable of pumping exceptionally large volumes of site water with only a 1.1kW, single phase motor. To emphasize this pump's site credentials, it is available in 110volts (in addition to 230volts) and has a running current of only 15amps. Furthermore, it has a built in capacitor and internal motor protection, to remove the need for cumbersome external control boxes. For durability, the outer body and strainer are constructed in corrosion resistant, 304 stainless steel and the motor head cover is in cast iron. The 420 stainless steel shaft is fitted with an ultra hardwearing, silicon carbide, double mechanical seal (in an oil chamber). A combination of a rubber diffuser and a chromium iron impeller provides excellent wear resistance in applications that contain sand and silt in suspension. The top discharge design reduces the base area size and facilitates locating and positioning in confined spaces. This design also enables efficient motor cooling when pumping small amounts of water. Supplied with 10 metres of heavy duty, H07RN-F rubber power cable.
